

GAURAV MAURYA

.NET Core Backend Developer | REST APIs | SQL Server | Microservices

Ahmedabad, Gujarat · gauravmaurya919@gmail.com · +91 84189 31740 · linkedin.com/in/gaurav-maurya-830a071a6

PROFESSIONAL SUMMARY

Results-driven **Backend Developer** with **3+ years** of experience engineering high-performance REST APIs and enterprise applications using **.NET Core, C#, ASP.NET MVC, and SQL Server**. Delivered a 35–40% reduction in API response latency through LINQ optimization and Redis distributed caching, and a 30%+ boost in SQL query performance via stored procedures and indexing strategies. Architected server-side pagination supporting 10,000+ concurrent records with zero degradation. Recognized with the Employee Spotlight Award (May 2024) for high-impact backend optimization. Adept at clean architecture, SOLID principles, microservices design, and Agile delivery — seeking a high-growth backend or full-stack .NET role (on-site or remote).

CORE COMPETENCIES

.NET Core / C# · REST API Design · SQL Server · Redis Caching · Microservices · Clean Architecture · Entity Framework Core · LINQ Optimization · Docker · JWT / OAuth 2.0 · Angular / React · Agile / Scrum

TECHNICAL SKILLS

Core Backend	C#, .NET Core, ASP.NET MVC, ASP.NET Web API, Entity Framework Core, Dapper, Minimal APIs, gRPC, SignalR
Databases	SQL Server, Stored Procedures, Indexing, Query Optimization, Performance Tuning, Database Normalization
DevOps & Cloud	Docker, Azure App Service, Azure SQL, CI/CD Pipelines, Git, GitHub, Bitbucket
Frontend	Angular, React, Next.js (SSR), HTML5, CSS3, Bootstrap, TypeScript, JavaScript
Architecture	Clean Architecture, Vertical Slice Architecture, N-Tier, Repository Pattern, SOLID, DI, Design Patterns
Security	JWT Authentication, OAuth 2.0, Role-Based Access Control (RBAC), API Security
Tools	Visual Studio, VS Code, Postman, Swagger/OpenAPI, SSMS, Jira, GitHub Copilot, Cursor

WORK EXPERIENCE

Backend Developer — Technobrains Business Solutions

May 2023 – Present | Ahmedabad, India

- Engineered 15+ scalable REST APIs using .NET Core and C# for high-traffic production systems handling 10,000+ concurrent records — maintaining sub-200ms average response times across all critical endpoints.
- Spearheaded LINQ query optimization and restructured data access layers, eliminating redundant DB calls and achieving a 35–40% reduction in API response latency across 8 performance-critical endpoints.
- Architected optimized SQL stored procedures, functions, and indexing strategies in SQL Server, accelerating query execution by 30%+ and cutting report-generation time from ~12s to under 4s.
- Implemented Redis distributed caching for high-frequency read operations, reducing database round-trips by ~60% and improving API throughput under peak load.
- Designed server-side pagination and dynamic multi-filter APIs for datasets of 10,000+ records, enabling smooth UX with no front-end performance degradation.
- Refactored a legacy monolithic codebase into clean architecture layers (Repository Pattern, DI, SOLID), improving testability and modularity — reducing onboarding time for new engineers by ~50%.
- Resolved 20+ critical performance bottlenecks through profiling and query execution plan analysis, directly improving system reliability and end-user satisfaction.
- Collaborated in Agile/Scrum sprints across planning, code review, and production deployments — consistently delivering features on schedule with zero post-deploy regressions.

- Contributed to backend and frontend feature development using ASP.NET MVC and React, delivering enhancements across 4+ product modules within a fast-paced startup environment.
- Built and tested REST API endpoints, resolved 30+ bugs, and improved UI components — gaining hands-on experience in Git branching, code review, and Agile delivery workflows.

KEY PROJECTS

Hotel Booking Platform | *ASP.NET Core · Next.js · SQL Server · Redis*

- Architected REST APIs for real-time hotel search, availability management, and booking workflows — supporting 5,000+ simultaneous search queries with average response times under 300ms.
- Built a Next.js frontend with SSR and dynamic routing, cutting initial page load by 40% and improving SEO discoverability for 200+ hotel listings.
- Implemented multi-filter search (location, price, availability) backed by optimized SQL queries and Redis caching, reducing search latency by 50% vs. the initial implementation.

Human Resource Management System (HRMS) | *ASP.NET MVC · React · SQL Server*

- Engineered backend modules for attendance, payroll, leave management, and task assignment — processing data for 500+ employees with RBAC enforced at every layer.
- Optimized SQL stored procedures and indexes for large employee datasets, reducing average report query time by 65% (from 8s to under 3s).
- Implemented automated validation and business logic workflows, eliminating manual data-entry errors and ensuring 100% data integrity across all HR processes.

E-Commerce Platform | *.NET Core · Angular · SQL Server*

- Built backend services for order management, product catalog, inventory, and payment processing using clean architecture — handling 1,00,0 daily transactions.
- Integrated a third-party payment gateway with idempotency checks, retry logic, and error recovery, achieving 99.9% transaction success rate in production.
- Developed Angular frontend for product browsing, cart, and multi-step checkout with real-time order tracking via event-driven API workflows.

Umbraco CMS Websites | *Umbraco v7/v13 · .NET Core · C#*

- Developed and maintained CMS-driven websites for 5+ clients using Umbraco v7 and v13, enabling non-technical teams to manage dynamic content independently.
- Integrated third-party APIs and applied caching strategies, improving content delivery speed by 35% and eliminating repeated DB fetches for static content.

EDUCATION

B.Tech in Computer Science & Engineering — Rungta College of Engineering and Technology, Bhilai | GPA: 8.1 / 10 | 2018 – 2022

ACHIEVEMENTS & RECOGNITION

Employee Spotlight Award – Technobrain's Business Solutions (May 2024): Recognized for consistent high performance, measurable backend optimization contributions, and proactive ownership of performance-critical API and database improvements.

Delivered 35–40% API latency reduction and 30%+ SQL performance improvement within Year 1, directly contributing to better end-user experience and system reliability.
